Release Notes for Public PTF (2010-10-27)

1. Origin Product/Version

OX v6.18.1 Rev 5

2. Packages shipped with this PTF Release

OX v6.18.1 Rev 6 (built 2010-10-25/26)

3. Bugs fixed with this PTF Release

17293   The action "store" is disabled due to server configuration
A wrong default always assuming that the session cookie store requests works caused the issue. The fix sets the default to false and only enables the cookie store request UI reliably determined that it is allowed.
There are no possible side effects.

17304   Fehlermeldung: Kein passender Ordner-Speicher für Baum-ID "0" und Ordner-ID "null". (FLD-1004, -934169575-21)
IMAP ACL access identifier could not be resolved properly to internal users. This is caused by a global IMAP server configuration while the code always tried to match the server to the one configured specifically for the user. The fix checks if a global IMAP server is configured and matches then the current server to the globally configured one.
There are no possible side effects.

17309   Subscribed shared IMAP folders from other users are not shown in GUI
Due to the complete rebuild of the folder tree and the side panel the information get lost that a folder must be listed if it either is subscribed or if it has subscribed subfolders. The UI only checked the subscribed flag. The fix adds the check for subscribed subfolders flag.
There are no possible side effects.

17320   new folders are some times named "new folder 2" for german users
The initial label "New folder" of a newly created folder was not translated. The fix adds the required translation function call.
There are no possible side effects.

17321   Windows Mobile: Appointments duplicate after they have been accepted
Accepting appointment invitation triggered duplicate appointments on iPhone and Windows Mobile in some cases.
There are no possible side effects.

17323   no contacts imported from Facebook after successful subscripton
        This is not eligible for auto-update as the respective step needed to be
        edited. Users are required by facebook to conform the application
        accessing their data. This needs to happen only once (the first time).
        The new Facebook-step does this automatically.
        There are no possible side effects.

17328   +- box does not disappear after deleting the last subfolder
        After deleting the only subfolder of a folder, the tree view kept
        displaying the expand/collapse icon for that folder, even though the
        folder did not contain any subfolders anymore. The fix adds an update of
        the internal folder data after the delete successfully completes.
        There are no possible side effects.

17330   rename email folder generates endless request loop
        Composing proper fullname when renaming a mail folder on root level.
        There are no possible side effects.

17339   Subscribed shared IMAP folders are shown after a relogin, not
        immediately
        Refreshing the folder tree did not refresh unsubscribed folders of the
        default mail account. The fix treats unsubscribed folders in the default
        mail account the same as all folders in external mail accounts and
        removes them from the GUI's cache, so that an up-to-date version is
        fetched from the server immediately or the next time they become
        visible.
        There are no possible side effects.

4. Changes relevant for Administrator

Changes of configuration files

- none -

Changes of database schemes

- none -

Changes of command line tools schemes

- none -

5. Changes relevant for Developers

Changes of the HTTP API

- none -

Changes of the RMI API

- none -

Changes of the WebDAV API

- none -

6. Tests

To avoid side effects the packages have gone through automated "Smoke" and "Always" test on both, the OX Build System and a distributed OX QA server setup.
The OX QA team has verified all bug fixes.

7. Side effects

No side effects.
