

## Release Notes for Public PTF (2011-01-07)

### 1. Origin Product/Version

OXHE v6.18.2 Rev 14

### 2. Packages shipped with this PTF Release

OXtender for Business Mobility (open-xchange-eas)

### 3. Bugs fixed with this PTF Release

17881 Accepted appointment not synced to iPhone  
When User A creates the appointment, then a synchronization to User B's calendar folder on User B's iPhone is triggered immediately by the push mechanism. Because the appointment is not yet accepted, it will not be transferred to the iPhone now. So the appointment exists on the USM side, but not on the iPhone side. If User B's mail folder would be synchronized manually to the iPhone at this point of time, then a meeting request would be displayed on the device. This behavior is fine.

When User B accepts the appointment on the OX UI, then an immediate synchronization of User B's calendar folder is triggered again by the push mechanism. This time, the appointment is transferred to the device. But since the appointment already exists on the USM side, it is transferred as "changed" and not as "added". The iPhone does not know this appointment and ignores the change command, therefore the appointment is not visible on the device. This has been fixed.  
No possible side effects.

### 4. Changes relevant for Administrator

#### Changes of configuration files

- none -

#### Changes of database schemes

- none -

#### Changes of command line tools schemes

- none -

## 5. Changes relevant for Developers

### Changes of the HTTP API

- none -

### Changes of the RMI API

- none -

### Changes of the WebDAV API

- none -

## 6. Tests

To avoid side effects the packages have gone through automated "Smoke" and "Always" test on both, the OX Build System and a distributed OX QA server setup.

The OX QA team has verified all bug fixes.

## 7. Side effects

No side effects.
