Open-Xchange Server 6

Minor Release v6.20.5

Feature Overview

v1.1

Topics

1.   About this Release

This release covers a number of user interface and backend improvements.

The main improvements are:

- Improved Invitation Handling
- Export of Tasks

In addition we have included new and improved versions of the different OXtender's.

The Open-Xchange preview server https://www.ox.io/ gives you access to the latest developer version where you can check out all the new features included in the next software release. This means it is not necessary to install the Open-Xchange Server.

2. OX 6 – Improved Invitation email Handling

2.1. Sending mail with an configured default sender address

One of the main changes of the new improved invitation handling is sending mail with a configured default sender address. This is now possible when configured at the device. Additional appointments or invitations created at the device will use the configured default sender address.

2.2. Email for resources are marked "[Resource]"

With the improved invitation handling, the information "[Resource]" will be displayed within invitation email.

This new handling gives a better overview of the different invitation mails, especially for the resource manager. It is now possible to have a better overview concerning requested resources.

2.3. Invitation Mail provides correct time zone

The improved 6.20.5 invitation handling provides the correct time zone within the invitation email. With the new interaction, the invitation email will always shown the time zone of the appointment creator. This helps to see the correct scheduled time zone for the invitation.

3. OX 6 – User Interface Features, Plug-In's, etc.

3.1. Export of Tasks

With release 6.20.5, Open-Xchange has added additional functionality to the task module. With this release version, users have the possibility to export complete task folders directly from the user interface.

The new functionality is provided via a right-mouse-button and from the sub-menu "Extended." The user can Export—from the iCalendar format--the task folder. In addition to the export of different calendars, this greatly improves the usability of the user interface and utility of the task module.
