

Release Notes for Public PTF (2011-03-30)

1. Origin Product/Version

OX v6.20.0 Rev 3

2. Packages shipped with this PTF Release

OX v6.20.0 Rev 5 (built 2011-03-28/30)

OXtender 2 for Microsoft Outlook v7.0.12

3. Bugs fixed with this PTF Release

- 14435 Moving whole-day appointments before 1970 moves them one day too far in the future
Dealing with the correct and normalized "Date" now.
No potential side effects.
- 16011 Useless Error Messages when Closing a second OX Window
Removed the useless error message from logout process.
No potential side effects.
- 16645 IE8: select multiple participants with SHIFT selects text
Fixed mouse events.
No potential side effects.
- 17963 "Unparseable date" at EXDATE attribute of google ical
Interpreting the data as 00:00, which is what recurring appointment exception in OX do anyway.
No potential side effects.
- 18102 Can not order the mail list by the key of flag.
When sorting mails by flag and changing the flag of a mail, the sort order is updated automatically.
No potential side effects.
- 18324 Sync of Sub-folders, shared and public Folders
Fixed bugs occurred with the sync of all folders over EAS.
No potential side effects.
- 18413 Toolbar - Sometimes old panel in firefox
This was a bug in a specific Firefox version. Changed method handling of the alternative toolbar.
No potential side effects.
- 18482 Address book csv import fails on file with BOM
Fixed a problem with starting quota signs.
No potential side effects.
- 18556 Upsell Multiple doesn't hide flash UWA widgets
The UWA widget now uses the correct function to set itself as a modal dialog.

- No potential side effects.
- 18557 IE8 complains about unsecure content inside OX
Problem was caused by adding an image as backgroundImage with CSS.
No potential side effects.
- 18575 Mail filter "is on" comparison in date test is not internationalized
This problem occurs through a missing i18n call in the GUI.
No potential side effects.
- 18600 Server Error (500) for servlet/webdav.contacts/foo.xml
The server now send a more detailed error message to the Oxtender.
No potential side effects.
- 18604 "Unable to parse value "undefined" within field folder as a number"
when accessing appointment
List request was broken on server side.
No potential side effects.
- 18610 Print opens an empty window in contact detail view
Print doesn't work in general when using non-embedded windows. This
has been fixed.
No potential side effects.
- 18633 Move operation may be inconsistent
Proper removal from user-sensitive folder cache on move operation
No potential side effects.
- 18642 Accept an already on iPhone declined appointment in Web GUI doesn't
push the appointment to iPhone
the MeetingResponse command was changed, in the response sent to
the client now all references to the original appointment are removed if
an invitation is declined. This causes the iPhone to not associate the
invitation with the appointment, and therefore no deletion is sent by the
iPhone. The workaround that prevented deletions shortly after
MeetingResponses has been removed, since it's no longer required.
No potential side effects.
- 18668 "Show in calendar" does not switch to the appointment when being at
the calendar
Calendar didn't jump to current view.
No potential side effects.
- 18681 Multiple Invalid SQL Query in logs of EAS host
Removed contact caching because it causes a memory leak. Loading
contacts in blocks with size of 1000.
No potential side effects.
- 18709 Sent mails have a leading whitespace on newlines
Removing starting white-space character on html2text conversion
No potential side effects.

- 18711 EAS all-folder-sync also synchronized reminder for foreign appointments
The USM code has been adjusted, the handling of the alarm/Reminder field has been extended. The field content will be synchronized from/to client only if one of the following conditions is met:
- The containing folder has a type of 1 (private)
 - The containing folder has a type of 2 (public) and the field "users" is either not set by the OX server (AFAIK this should not be possible) or contains an entry for the current user (i.e. same user id)
- No potential side effects.
- 18712 EAS all-folder-sync duplicates the global address book
Synchronization of the global address book has been disabled. It will be reported as "other" folder (one that cannot be synchronized), if a client tries to synchronize the folder, an error is reported. We cannot exclude the folder completely from the folder hierarchy, since it might (at least theoretically) contain other folders that should be synchronized.
No potential side effects.
- 18713 oauth-twitter is missing after updating
Fixed package dependencies.
No potential side effects.
- 18719 FF loads GUI files with default apache config over and over again
po-files and some images weren't cached.
No potential side effects.
- 18720 "unified mail" folder has "create new folder" in RMB menu, which gives an error on usage
You are no longer able to create folders either under "Unified Mail" or any of its subfolders.
No potential side effects.
- 18721 "root" mail folders are displayed in gray in customer environment
Actually, tree.0 used opaque icons for account folders both in expert and non-expert mode. tree.1 showed opaque icons in expert mode. So, only tree.1 in non-expert mode showed gray icons for account folders including unified mail. Now, all account folders and unified mail root use opaque folders.
No potential side effects.
- 18723 Content of contacts fields not shown in IE8
Fixed a timing issue which only occurs with the Internet Explorer 8.
No potential side effects.
- 18729 RSS feed from "Tagesschau" only shows the first headline
Internal indexing of RSS feeds didn't worked for this feed.
No potential side effects.
- 18732 Flat lists scroll to top when selecting a folder
Using the correct click events solved the problem.
No potential side effects.

- 18738 Context menus close after opening them with IE9/FF4
This was another key/mouse event handling problem.
No potential side effects.
- 18739 No shadows in embedded windows
Solved the problem by using the correct CSS style in IE9.
No potential side effects.
- 18753 Portal page shows different e-mail messages status than the mail module
This was caused by reusing DOM node and not clearing the CSS.
No potential side effects.
- 18755 imapauth user login via imaps not possible any more
Fix for bug 16324 introduced parsing of IPv6 addresses. Unfortunately does the fix not set a secure flag for the defined connections. This flag is not used internally in the backend, so the problem was not found during tests. But it is used by the imap authentication bundle causing bug 18755. The fix correctly sets now the secure flag.
No potential side effects.
- 18761 SOAP interface broken (most User and Context operations)
Fixed in adding the getters getNamespace, getUserAttributes, getUserAttributesForSOAP, aliasesForSOAP to the axis exclude list.
No potential side effects.
- 18765 Default E-Mail signatures are not added when composing a mail
Adding the signature now works like expected.
No potential side effects.
- 18766 Directly saved mail filter rule looks different before and after saving
New mail filter rules now have a default condition "all e-mails".
No potential side effects.
- 18767 conflict with russian language in open-xchange-gui
Removed russian language from -gui package
No potential side effects.
- 18772 UWA configuration gets inactive when closing the popup
A wrong method was used to close the modal dialog
No potential side effects.
- 18795 No automatic line breaks when using default signature and plain-text mail
An additional empty line has been added to the mail compose window.
No potential side effects.
- 18800 Calendar Week View: Title not displayed in appointments with status 'waiting' or 'tentative'
The text to append was accidentally overwritten by the "tentative" or "waiting" string.
No potential side effects.

4. Changes relevant for Administrator

Changes of configuration files

- none -

Changes of database schemes

- none -

Changes of command line tools schemes

- none -

5. Changes relevant for Developers

Changes of the HTTP API

- none -

Changes of the RMI API

- none -

Changes of the WebDAV API

- none -

6. Tests

To avoid side effects the packages have gone through automated "Smoke" and "Always" test on both, the OX Build System and a distributed OX QA server setup.

The OX QA team has verified all bug fixes.

7. Side effects

No side effects.
