1. About this Release

This is a bug fix release for the OXtender 2 for Microsoft Outlook. In addition to bug fixes some improvements and extensions have been provided, and to address some unwanted effects, some configuration parameters had to be modified.

Please note:

Prior to installing please make yourself aware of the Known Issues described in this document.

2. Shipped Packages and Version

2.1. OXtender 2 for MS Outlook

Version: v7.0.21 (2011-07-21)

The version number can be found at -> OXtender2 -> Options -> About

Details about this update are provided in separate release notes for the OXtender 2 for MS Outlook.

3. New Features

- Support for Microsoft Windows Terminal Server 2003. OXtender 2 for Microsoft Outlook has been tested and optimized for operation on Microsoft Windows Terminal Server 2003.

4. Major Changes

This chapter describes the major changes relevant for

- Developers
- Administrators
- End Users
- License changes

4.1. Changes relevant for Developers

- none -

4.2. Changes relevant for Administrators

Added special error messages for CVT_E_PROFILE_CONFIG_FAIL

To indicate problems during profile configuration, upcoming versions of the MAPI provider will use the new error code CVT_E_PROFILE_CONFIG_FAIL. For this code, special error messages have been added guiding the user to ensure that Outlook is the default mail client.

Added 'Priority' attribute for sync issue rules

The rules to handle synchronization issues automatically in SyncIssueHandling.xml now have a new attribute "priority", so that they can be ordered.

Added registry keypath for oxstor32.dll component in installer package

To avoid registration issues when a newer fileversion of the oxstor32.dll in the system folder is detected during installation, the corresponding component in the installer package now uses a registry resource as keypath.

Added handling rule for 0x800d0003 errors

For USM error 0x800d0003 ("database error"), a new error handling rule has been added leading to an automatic retry up to ten times.

Added logic to add a sysinfo.txt file to the list of logfiles automatically

The list of logfiles (as found in the options dialog or in the error details dialog) now also includes a textfile containing various system information.

Added interactive handling for FLD-1030, FLD-0027

For the error FLD-1030 (no mail folder allowed below a public folder), an interactive error handling has been implemented, allowing the erroneous folder to be removed or moved back automatically. For FLD-0027 (public folder can only be moved to another public folder), an interactive error handling has been implemented, allowing the erroneous folder moved back automatically or deleted permanently instead of moving it to the personal trash folder.

4.3. Changes relevant for End Users

- none -

4.4. 3rd Party Libraries and Licenses

- none -

5. Bug Fixes

The following list shows the resolved bugs, reported by customers and partners since the release. The Open-Xchange QA team has verified all bug fixes:

- 19845 Outlook freezes during groupware request
- 19596 Spelling Mistake "Spanish"
- 19439 Error by still existing appointment-email in the inbox
- 19732 Addin doesn't recognize OXtender 2 store when it is not the last account in the profile
- 19812 Deleting an appointment results in useless error message
- 19813 Outlook OXtender doesn't work in conjunction with Funambol Outlook Software
- 19815 Deleting folder in public folder causes error

6. Known Issues

6.1. Known Issues – Oxtender 2 for Microsoft Outlook

6.1.1. Functional Limitations

Translations

Due to last minute changes in the user front-end, a few strings could not be translated in time. An update of the respective language packs will be available shortly.

6.1.2. Known Bugs of Severity blocker, critical, or major

The following bugs have been reported recently and will be considered with a minor release scheduled for October 2011.

Bug No Description

17215	No support for Outlook 64-Bit and Oxtender 2
