2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2473.

37364 Context menu blocked after renaming a folder

After renaming a folder, the context menu did not get triggered anymore when clicking that folder. This was caused by a missing update of folder IDs after a rename and has been fixed by using the new ID at the context menu as well.

37362 Newly added mail accounts not instantly visible

After adding external mail accounts, the folder tree has not been automatically updated. This has been solved by making the tree aware of account removal or creation.

37357 "Refresh" indicator permanently active

The upper right refresh indicator for AppSuite was constantly active when getting into a race-condition where one request dropped callbacks of another, identical request. This has been solved by unmarking a request as pending before calling any handlers.

36269 OX6 Setup-Assistent lacks support for Google and Xing O-Auth

Backend changes about social plugins not reflected in OX6 frontend.

This has been fixed by replacing Xing user/password wizard with oauth and by rewriting Google and Xing tab to combine user/password and oauth. Now also correctly build DOM tree in caes oauth integration is disabled/missing.

36476 Unable to delete appointments from a shared folders

When trying to delete a appointment within a shared folder, the client intercepts the operation to avoid moving the appointment to the users personal "Trash" folder. A dialog is shown to confirm immediate removal of the appointment. This dialog however used a wrong return value so the appointment could not be removed at all. This has been solved.

3 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

37364, 37362, 37357, 36269, 36476,
