2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #3630.

47873 Filename information is lost when moving files between different file storages

Now setting the filename when moving files across different file storages to solve this issue.

47888 NPE when trying to edit the description of a file in a Dropbox account within the AppSuite

Edit the description of a file in a Dropbox account were not possible with the AppSuite-UI.

Un-mangle the file identifier to fix this.

47893 Folders in cloud storages with dots '.' in their names are not queried correctly from the UI

It was not possible to retrieve information from cloud storage folder if they contain a dot in folder name.

Now cid method removed all '.' from the ids to fix this issue.

48292 Usercopy fails with "Unexpected problem occurred"

UseCountCopyTask used a wrong mapping object and tried to copy use counts of internal users and usercopy failed.

This has been fixed by using the correct mapping object and skip use counts of internal users.

48495 New arriving mails are sorted somewhere into existing mails in list view

Sort handler was called before models were drawn and list were messed up.

This has been solved by skipping sort when queue contains items and sort manually once the queue has been processed.

48629 Appointment jumps one day back if time changed more than 12h

Local date instead of internal utc date were used in one calculation.

This has been fixed by sticking to utc-based calculations.

49083 E-Mail-Folder Action 'delete all messages' ignores OVERQUOTA

Copy command was able to run into overquota.

This has been fixed by using move operation for clear folder command in case move operation is supported by imap server.

49091 Show requests for read receipts setting is not hidden when protected

Configurability for all settings is not available.

Extend checkbox-related code in mail settings pane to consider configurability for this setting.

49103 No additional address books loaded in picker on mail compose

Too many contacts thus hitting the default limit of 10000 contacts.

Now exclude the global address book from the picker to avoid an unresponsive dialog. New settings is: `io.ox/contacts//picker/globalAddressBook=true/false`.

49196 Users can not be added to group

It was not possible to add a user to a group containing a space in the name and were created by the command line tool.

This has been solved by using CHECK_GROUP_UID_REGEX property for group name validation during http-api calls.

49491 IMAP session Timeouts after switching the IMAP backends

Mutually exclusive access to shared instances of 'javax.mail.internet.MailDateFormat' prevent concurrent threads to parse IMAP INTERNALDATE/ENVELOPE fetch responses.

Deal with possible locked shared instances of 'javax.mail.internet.MailDateFormat' to not block concurrent threads that attempt to parse IMAP INTERNALDATE/ENVELOPE fetch responses.

49543 Show hidden files and folders is not hidden when protected

No generic support to hide each user setting.

This has been solved by adding support for this particular setting.

49572 Dropbox/box.com: upload a new version overwrites file

Add new version overwrote the original file.

Properly add new file revision in case of explicit "Add new version" call and make "file_versions" capability available via folder API through field "supported_capabilities".

49575 Google drive: filename in version info not updated

Wrong file-name/title advertised to client when querying version/revision history for a file.

This has been fixed by setting proper file-name/title when retrieving version/revision information for a file.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

47873, 47888, 47893, 48292, 48495, 48629, 49083, 49091, 49103, 49196, 49491, 49543, 49572, 49575,
