

Release Notes for Patch Release #3878

January 23, 2017

Security Patch Release

This Patch Release addresses critical vulnerabilities; please consider deploying it as soon as possible. Not deploying this Patch Release may result in remote service exploitation, security threats to users and exposure of sensitive data.

Detailed vulnerability descriptions will be publicly disclosed no earlier than five (5) working days after public availability of this Patch Release. There is no indication that one or more of these vulnerabilities are already getting exploited or that information about them is publicly circulating.

2 Vulnerabilities fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #3848. Solutions for vulnerabilities have been provided for the existing code-base via Patch Releases.

50382 CVE-2016-10077
CVSS: 5.4

50721 CVE-2017-5211
CVSS: 4.3

50723 CVE-2016-10077
CVSS: 4.3

50733 CVE-2016-10078
CVSSv3: 3.6

50734 CVE-2016-10077
CVSS: 5.4

50737 CVE-2017-5213
CVSS: 2.2

50739 CVE-2017-5212
CVSS: 6.4

50748 CVE-2017-5213
CVSS: 4.3

50760 CVE-2017-5211
CVSS: 7.1

50764 CVE-2017-5210
CVSS: 4.8

50893 CVE-2017-5211
CVSS: 4.3

50940 CVE-2017-5211
CVSS: 7.1

50943 CVE-2016-10077
CVSS: 5.4

3 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #3848.

50258 Categories - select all in one of the tabs - info message that no all mails all selected is missing

Added new message for "select all" in tabbed inbox, some translation will be provided with the next patch.

50596 Invitation mail - accept/decline/tentative did not trigger an update immediately

For external invitations mails model wasn't updated after updating the status. This has been fixed by also updating models before repaint them.

50738 Not possible to import multiple mappings with csv file

"Addmapping" value was not split by comma when supplying multiple login mappings via csv file at create context.

Now split multiple login mappings by comma during context creation from csv file to solve this issue.

50835 Report doesn't terminate if contexts are broken

In case of a context that never existed on the system, a lookup for all contexts in the same schema lead to endless attempts to get those contexts.

This has been fixed by adding the initial context to context list, if the database returns no values for the given context id. Add potential errors to output report.

4 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

50258, 50596, 50738, 50835, 50382, 50721, 50723, 50733, 50734, 50737, 50739, 50748, 50760, 50764, 50893, 50940, 50943,
