2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #3924.

50016 When composing an email, the signatures do not get refreshed, when adding initial/new one
This has been fixed by using standard listener.

50041 Moving files with description to external storage not working
Missing translations were added.

50258 Categories - select all in one of the tabs - info message that not all mails are selected is missing
Missing translations were added.

50371 Moving e.g. 200 mails to another category tab is not easily possible
Missing translations were added.

50714 OXtender synchronization fails with Couldn't determine extra fields in object with errors
The ical analysis of an external invitation delivers an json object "users" without sub fields, especially without confirmation. This was unexpected by USM and produced an error, which led to a general sync error with OLOX.
Now the missing confirmation is accepted and initialized by USM with 0.

50798 Renaming a root level folder which contains a Favorite Folder will lead to "Mailfolder not found on IMAP Server"
Missing checks if parent folders get renamed or removed.
This has been solved by looking for rename or removal of parent folders. On rename: anticipate changed path and keep folder. On remove: immediately remove affected favorites. This doesn't work if triggered by another client.

50837 Birthday on 1.1.1970 not displayed
Timestamp for 1.1.1970 were interpreted as timestamp 0.
Adjusted calculation from Birth Dates to solve this issue.

50997 Searching inside of sent mail folder always shows senders name in results column
This has been solved by adding special handling in find app.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.
To avoid side effects, the shipped packages have gone through automated regression test on both,

a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

4   Fixed Bugs

50016, 50041, 50258, 50371, 50714, 50798, 50837, 50997,
