2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #3994.

51222 Big text file load endless with the UI

The client request didn't get a response.

With these changes the Viewer displays an error message if the file is too big to be loaded.

51357 After last update to 7.8.3 no participants can be added in Scheduling with IE11

IE has problems with flexbox styles.

This has been solved by changing styles to fix the problem.

51548 Moving files which already exist result in duplicate files with google drive

There was no name check performed for the move operations.

This has been fixed by adding the name check to the move operation.

51569 Primary mail address and aliases cannot be changed at the same time if the old primary mail address should be an alias

During the createuser command an alias for the primary mail account is already added. This alias is equal to the upper case notation used in the create command. The change command now tries to add the same alias but with only lower case letters. This isn't recognized and therefore the middleware tries to insert this alias to the db again which results in the duplicate entry error.

Solution: Do a case independent check when comparing the old with the new aliases.

51570 Only one warning for copy multiple files with description in drive

Multiple response was not fully processed.

This has been fixed by processing full array.

51572 Moving files with and without description not working in drive

Appsuite UI just redid the same operation.

Solution: Appsuite UI checks which files caused conflicts and only tries to redo those.

51727 Mail icon stills appears in UI even though mail is not enabled

Caused by missing capability check for disabling and hiding.

This has been fixed by adding the missing check.

51898 Mail with invalid MIME type attachment cannot be displayed

When you try to display or import an email which contains an attachment with an invalid MIME type as content type, an error was thrown.

This has been fixed and it is possible to import and display the mail.

51910 Huge amount of threads stops OX

Did some improvements to avoid a crashing OX. Utilize a user-scoped lock mechanism to avoid having a global lock that might affect unrelated threads unnecessarily. Avoid duplicate remote session look-up.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

51222, 51357, 51548, 51569, 51570, 51572, 51727, 51898, 51910,
