2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4691.

58333 Incorrect hyper-link encoding for certain links

In case hyper-links in mail contain percentage signs for URI parameters, those could lead to a incorrect locations since we were encoding them twice. This has been solved to just encode quotes in links.

58207 Mail file size reported as zero when switching conversation sort

When sorting mails by size and toggling conversation view on and off, a incorrect file size has been displayed. This has been solved by resetting old collections on toggle.

58201 Address book property "town" has been changed to "city"

Based on suggestions we renamed the property "town" to "city" on the web frontend.

58187 Missing branding for mobile tour

When using OX App Suite on a smartphone browser, parts of the tour were not correctly branded. We made sure that the `productName` properties are being used correctly for mobile assets as well.

58158 OX App Suite login page shown during SAML redirection

When using specific SAML based authentication methods, the default login page of OX App Suite has been shown for a split second. We're now skipping the default login process when using SAML and redirects even before the login screen is rendered.

58019 Unable to forward multiple mails

When using a certain MAL implementation, workarounds were to be used with can lead to an error when trying to forward multiple mails. We're now avoiding the workaround in case multiple mails are being selected.

57841 Appointment colors are not printed

Appointments without a custom color were not colored according to their calendar folders color, if it has been set. This has been solved by adding the color label of the parent folder to all appointments that don't specify their own color while printing.

57831 Logstash JSON output contains linebreaks

When using Logstash as log output, long stacktraces could be delivered as JSON file with linebreaks, which messes up the Logstash encoder. We identified the culprit at a JSON generator of a third-party library, which splits JSON after processing a certain amount of bytes. We replaced usage of this library by manual JSON object compilation.

57627 Some signatures are not getting removed

When trying to remove certain HTML signatures from mail compose, a cleanup method to sanitize HTML was a bit too strict and embraced HTML5 standards. We're now examining API responses for signatures in more detail with less strict cleanup.

56720 Incorrect Japanese translation for mobile search

When using search on mobile browsers, the folder selector did show an incorrect translation. This has been corrected with proper translation.

3 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

58333, 58207, 58201, 58187, 58158, 58019, 57841, 57831, 57627, 56720,
