2   Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4685.

58520   ja translation for "File into" and "Copy into"
Japanese translations were misleading for "File into" and "Copy into".
Changed translation as required.

58509   Moveuserfilestore fails with NPE
Moveuserfilestore used wrong filestore.
This has been fixed by using properly loaded filestore.

58493   Filter rules are not translated in Japanese
Added missing translation inside filter rules.

58491   Folder context menu is not shown in mobile UI
Contextmenu property was not properly set and considered on mobile.
This has been solved by adding property to folder node and adjust handling.

58279   No Unified Quota service available for file storage
This was caused by a wrong order of checks.
This has been fixed by adjusting the order.

58265   Inaccurate quota error message to the customer during IMAP connection issues
This has been fixed by adding "[TRYCREATE]" to known IMAP response codes.

58079   Unclear and not translated error message when validation failed for anyof sieve rule
Missing validation for an empty nested rule.
This has been solved by adding validation for an empty nested rule.

58052   Attachment name containing circled numbers ??? is garbled
This was casued by an intentional support for a minimal set of character.
This has been solved by also supporting various chinese, japanese and korean character in file names.

57529   Subscribe push is failing on server
Was caused by a deadlock when registering permanent push listeners.
This has been fixed by resolving possible deadlock situation when registering permanent push listeners through less excessive locking.

3 Changes relevant for Operators

3.1 Changes of Configuration Files

Change #SCR-175   Added new property com.openexchange.server.migrationRedirectURL to server.properties
From the server.properties:
```
#Specifies the redirect URI/URL during cluster migration to which a client is redirected
in case it landed on a unsuitable node (running incompatible application code).
#E.g.  a user gets routed to a node running application code in version X, but that account
has already been migrated to application code in version Y, e.  g.:  http://1.2.3.4
#No default value
com.openexchange.server.migrationRedirectURL=
```

4 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.
To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

58520, 58509, 58493, 58491, 58279, 58265, 58079, 58052, 57529,
