

## Release Notes for Public PTF (2010-02-15)

### 1. Origin Product/Version

OXHE v6.14.0 Rev 12 (Public PTF 2010-01-20)

### 2. Packages shipped with this PTF Release

OXHE v6.14.0 Rev 14 (built 2010-02-10)

### 3. Bugs fixed with this PTF Release

- 15287 Sending mails from umlaut domains not possible  
The fix corrects the comparison of email addresses if punycode is used.  
Possible side effects are that other functions around email addresses with punycode may not work.
- 15104 Onlinehelp does not work with IE6  
Added link to online help directory in the toplevel gui directory so ie6 compat gui now displays current 6.14 online help.  
No side effects.  
Attention: To use the Online Help under SUSE Linux Enterprise Server, you have to set the FollowSymLinks Option in the Apache configuration which isn't enabled by default. Otherwise the users will see a 403 error page.  
For more information refer to <http://sdb.open-xchange.com/node/246>
- 15354 Users cannot mail because of missing aliases in "user\_attribute" table  
Updating the attributes of a user was not done in a transaction. This may cause reading the users attributes while some update currently deleted all attributes before writing them again. Then the user was read without attributes and mainly without aliases. Writing of that attributes is with the fix encapsulated inside a transaction and reading empty attributes of a user is not possible anymore.  
No possible side effects.
- 15128 Trying to display a special mail whole the mail module is disabled  
The email is broken because it uses the same boundary for the nested mime multipart. Therefore parsing is very complex because mime multipart can not be directly distinguished. The fix tries to its best to parse the broken structure.  
No possible side effects.
- 15328 Several Crawlers not working any longer for 6.14  
Updated LinkedIn, GMX and Yahoo crawler yml files.  
No possible side effects.

15356 Facebook crawler displays "You entered the wrong password"  
Updated facebook crawler yml file.  
No possible side effects.

## 4. Changes relevant for Administrator

### Changes of configuration files

- none -

### Changes of database schemes

- none -

### Changes of command line tools schemes

- none -

## 5. Changes relevant for Developers

### Changes of the HTTP API

- none -

### Changes of the RMI API

- none -

### Changes of the WebDAV API

- none -

## 6. Tests

To avoid side effects the packages have gone through automated "Smoke" and "Always" test on both, the OX Build System and a distributed OX QA server setup.

The OX QA team has verified all bug fixes.

## 7. Side effects

No side effects.
